

## *New Concept in Broadleaf Weed Control*

*For the customer who wants the best possible broadleaf weed control with the highest turf quality. 6-month broadleaf weed control, possibility of no post-emerge spraying, no odor, and ability to re-seed after application.*

## *Benefits*

- Unique product, still no other on the market like it.
- Can be applied anywhere in the landscape except annual color beds.
- Little activity on grasses... means ultimate safety on turf grass.
- +8 month control of any broadleaf weed that comes from a seed.
- For the best results, combine Portrait® in the fall with Crabgrass Preventer<sub>2</sub> in the spring.

## *Green Light Portrait® Broadleaf Weed Preventer*

Green Light Portrait® effectively prevents the germination of dandelions, henbit, black medic, spurge, and many other broadleaf weeds.

Dandelions can be tough to control. For best results, apply a second application of Portrait® after 8 weeks.

*Green Light Portrait*<sup>®</sup>  
*Broadleaf Weed Preventer*

is a new concept in weed control--broadleaf weed control applied as a pre-emergent. *Portrait*<sup>®</sup> *Granules* are stable on the soil surface for up to 21 days, but need to be activated to be effective (i.e., rainfall or sprinkler irrigation). Applied in the fall season, long control of spring germinating broadleaf weeds can be expected. The product does not leach in the soil. Established turf may be reseeded in the fall following a spring application.

Size: 10 lb.

Covers over 2,100 sq. ft.
